How to IT enable your business

Our guide to modern business IT

Safeguard Your Cloud Connected Devices

ESET - Security that complements Office 365™

Robust Antivirus

Robust antivirus and antispysware that catches threats others miss. Keeping your cloud-accessing device clean and secure.

Monthly Billing

Monthly billing rather than an annual lump sum payment* in line with the subscription model of Office 365.

Powerful Firewall

Protect your business data from cyber criminals anytime, anywhere, with firewall security that keeps your device invisible on public Wi-Fi®

Easy to Add or Reduce Users

ESET MSP allows you to add or reduce the number of devices protected quickly and easily.

Small System Footprint

Speed up scans and keep employees on task with a small system footprint that prevents disruptive slowdowns or interruptions.

Removable USB Scanning

Removable media scanning permits secure sharing of files and other data, while keeping your device safe from threats.

*Annual billing also available

ESET is available at Computer Troubleshooters. Contact your CTS consultant today to arrange a security audit 1300 28 28 78

A typical business IT setup:

Your IT enabled business goals:

What determines your business IT setup?

Typically in most Australian businesses with multiple employees many core functions were handled by a server which was an integrated suite from Microsoft designed for running email, network infrastructure and applications. Now, with changes to licencing and technology, many functions can be hosted in the cloud and combined with a local Essentials Server. In identifying your ultimate solution to IT enable your business it will depend on your business requirements and stakeholder considerations, such as those below:

Business owner considerations

- Capital investment** – do you prefer to invest to upgrade systems or use a pay as you go subscription model?
- Space and operating requirements** – do you need to run your own infrastructure?
- Maintenance** – would hosting dramatically reduce staff or outsource costs for your IT support?
- Scalability** – will you need to add or reduce users in the future?
- Operating control** – can you trust an external IT expert to remotely manage your systems?
- Applications** – can you use hosted applications or do you need to host locally?
- Data usage and file sizes** – are your business characteristics suitable to use hosted applications?
- Broadband speed and capacity** – can your internet bandwidth handle hosted usage?
- Statutory data retention** – does your business have a requirement to hold and protect data?

End user considerations

- Access anywhere** – do your users need access from PC, tablet and phones?
- Syncing** – do your staff need synced email and data?
- Information sharing** – would accessing business information on the move be helpful to your staff?
- Seamless networking** – would eliminating the need for a VPN reduce access complexity and increase productivity?
- Backup and central control** – would automatic backup and centralised control reduce your risk of user originated data loss?

Network Security

Hardware and Virtual Firewalls

Award Winning Enterprise Level Protection for Small to Medium Sized Organisations and Distributed Enterprise.

A BUSINESS PHONE SOLUTION THAT'S **MORE THAN JUST TALK**

Fonality provides the communication tools you need to grow and support your business.

Unified Communications | Mobile Worker Support
Voice and Video Conferencing | Queue Management
Local, Hosted, or Hybrid Deployments | 24/7 Support
and much more!

Cloud

How does an IT enabled business look?

- Office 365 is the core of new IT environments, hosted in the Microsoft data centre it is controlled locally from an administration panel – user profiles and company policies can be managed remotely. This includes new user set up and management of existing accounts.
- Microsoft handle all email backup and maintenance in their Australian data centre backed by a 99.9% service level guarantee.
- Many financial systems are now cloud based (eg Xero, MYOB) enabling multi user access from anywhere and reducing the need for a local server installation.
- Workstations, tablets and smartphones licences and users can be managed remotely with Office 365, particularly in an environment of BYO device and multiple device access.
- OneDrive for business and Sharepoint can be used for synced files.
- Database, CRM and line of business applications need to be individually assessed to determine software licencing requirements and suitability for hosted, local, or virtualized environments.
- Telephony can now be integrated into the IT environment to gain seamless transfer, messaging and call management using Fidelity hosted VoIP phone systems. Skype for business provides group video conferencing without the need for specialist equipment.

Security considerations

With the evolution of cloud integrated systems the risks associated with internet and internal security is continually escalating:

- End user security** - workstations and laptops still require anti virus malware protection, scheduled backup, and regular preventative maintenance.
- Centralised user control and backup** - critical company information and local files needed to be protected and still require regular backup, possibly with offsite duplication.
- Unified threat management and content filtering** - can offer maximum external threat protection and enhanced business productivity to your internal network.
- Disaster recovery and data restoration** - business continuity can only be guaranteed with adequate backup and recovery procedures in place.

The Office 365 Solution:

Word Easy reading, easy writing on every device	Excel Create order, organise data, share insights	PowerPoint Make your point with clarity, your style
Outlook Stay productive and connected	OneNote All your notes on all your devices	Publisher Create something that helps you stand out
OneDrive Share and work together for your business	Skype Skype for business - make video and audio calls	Yammer Social networking within your team

- Always up-to-date. Never buy a new version of Office again!
- Multi device each user can install Office on up to 5 PCs or Macs
- Save to the cloud for backup and anywhere access
- Use Office on your smartphone and tablet up to 5 devices per user

How does the Office 365 core enable your business into the cloud?

Office 365 is a cloud based service hosted by Microsoft that provides anywhere access to your familiar Office applications, email, calendar, video conferencing and most up-to-date documents across your devices including laptops, tablets and smartphones.

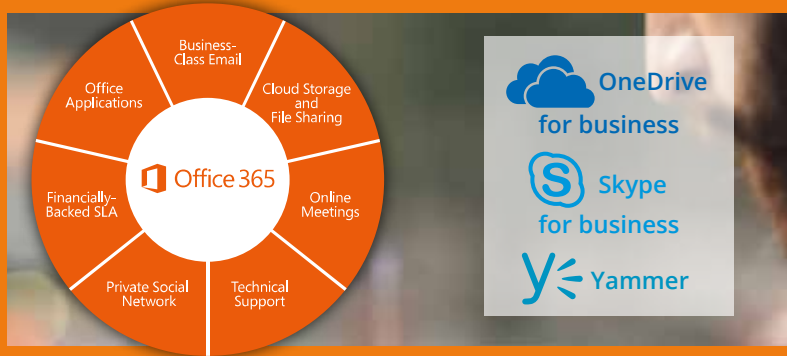

- Business class email** - Large 50GB mailboxes that can send messages up to 25MB with contacts, shared calendars, shared mailboxes, with data centre spam and malware protection. Office 365 allows access from across the globe with Outlook or web. You can use your own custom domain for your business email addresses, plus you get multi device syncing which allows a single view across all devices.
- Microsoft Office applications** - Outlook, Word, Excel, PowerPoint plus more - users licences are provided by subscription on multiple devices and are continually upgraded to new versions.
- Online document storage and file sharing** - 1TB of storage in the cloud to store, backup and easily sharing with other users. Files are accessible with user permissions from almost any device, versions synchronized and available for use without an internet connection.
- Video conferencing and private social networking** - Skype for business group scheduled online meetings including audio, video, recording and screen sharing. Yammer provides an internal social networking platform to share information, facilitate discussions and empower collaboration within work groups.

Office 365 advantages

- Work from anywhere on any device** - You have synced single view of your business.
- Trusted local infrastructure** - Office 365 is hosted in an Australian data centre with a 99.9% uptime service level guarantee.
- Reduce your capital expenditure** - Reduced core hardware purchases, plus Office 365 licencing is available as a monthly subscription.
- Cut operational and energy costs** - Reducing servers can reduce running costs substantially.
- Scale and flexibility for your business** - Office 365 licences can be added or removed at any time.
- No upgrades required** - Office 365 is always up to date and capabilities are added automatically.
- Remote support** - All Office 365 is administered from a central control panel built for remote administration.
